Certain observations on the international application Box No. VIII

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

International application No.

PCT/GB2004/001211

Re Item III.

Present claims 1-3, 7 and 8 relate to an extremely large number of possible primers (see definition of primers on p. 4, l. 31-p.5, l. 31; p. 8, l. 1-22, which comprise basically ANY possible primer sequence). Support within the meaning of Article 6 PCT and disclosure within the meaning of Article 5 PCT is to be found, however, for only a very small proportion of the primers claimed. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Consequently, the search has been carried out for those parts of the claims which appear to be supported and disclosed, namely those parts relating to primers as defined by SEQ ID NO:1 and 3.

Re Item V.

The following documents are referred to in this communication:

D1: US6291170 (Stanford University (US)) 18 September 2001 (2001-09-18)

D2: EP 0 549 107 A (SYNTEX INC) 30 June 1993 (1993-06-30)

1. Novelty and inventive step (Art. 33(2)(3), PCT)

- 1.1 It is pointed out that the present opinion concerning novelty, inventive step and industrial applicability only refers to subject-matter for which an International Search Report has been established (see Item III).
- 1.2 The present application relates to primers used in single primer RT PCR, which comprise at their 5' end a sequence found in the 5' end of the RNA molecule to be transcribed ("5' consensus sequence") and which comprise at their 3' end a sequence which can hybridise to the 3' end of the 3' region of the RNA molecule to be transcribed ("hybridising sequence"). Methods for recovering cDNA, pref. in combination with ribosomal display, and kits for carrying out said methods are also claimed.
- 1.3 D1 discloses inter alia primers for RT-PCR, which comprise a "5" consensus sequence" (here: T7 RNA polymerase binding site) and a "hybridising sequence"

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

International application No.

PCT/GB2004/001211

(here: poly T) (col. 3, lines 59-62; col. 8, lines 4-60; Fig. 1, SEQ ID NO:1). Further, a method for recovery of cDNA using said primer as the only primer (single primer PCR) in a reverse transcription step (col 3, lines 10-15) as well as a combination of this method with the use of a single primer; comprising the "5' consensus sequence" in a PCR reaction (SEQ ID NO:2) is described (col. 2, lines 14-19). Consequently, subject-matter of present claims 1-18 lacks novelty over D1 (Art. 33(2), PCT).

1.4 D2 describes several methods of single primer PCR, including a method which uses a primer containing a "5' consensus sequence" (here named EP2) and a "hybridising sequence" (here named EP1). The target polynucleotide to be amplified can be an RNA molecule which is amplified by the use of reverse transcriptase (Fig. 4; page 5, line 12-page 6, line 14; page 11, lines 47-49; page 15, lines 4-8; page 16, lines 44-45;). In view of D2, subject-matter of claims 1-8 and 12-18 does not fulfil the requirement of novelty as set out in Art. 33(2), PCT.

Re Item VIII.

- 2. Clarity (Art. 6, PCT)
- 2.1 It is clear from the description and claims that it is essential for the primers used in all claimed cDNA recovery methods to comprise a 3' end as defined in claim 1 (i.e. "a 3' sequence capable of hybridising to a 3' region of the mRNA").
 Since independent claims 12 and 22 do not contain this feature, said claims do not meet the requirement following from Article 6 PCT taken in combination with Rule 6.3(b) PCT that any independent claim must contain all the technical features essential to the definition of the invention.
- 2.2 It is not clear to which claim category (i.e. "product claim" or "method claim") claims 27 and 28 belong to.
- 2.3 Present claim 6 seems to be redundant in view of claims 1 and 5.
